AI High School Internship Job Description

1. AI Model Training and Deployment

- Assist in training machine learning models using Python libraries like TensorFlow, PyTorch, or Scikit-learn.
- Participate in deploying models to real-world applications or platforms.

2. Collaboration on Machine Learning Solutions

- Work with the team to brainstorm, develop, and refine AI-driven solutions.
- Contribute to team discussions on AI model performance and improvements.

3. Data Collection and Preprocessing

- Support the collection, cleaning, and preparation of datasets for model training.
- Learn and apply data preprocessing techniques, such as data normalization, feature scaling, and handling missing values.
