### **Construction Project Data Technician 1**

In this entry level position, the construction project data technician will work with the sales, administration, and estimation teams to evaluate blueprints/projects and utilize intelligence driven estimation + accounting software to determine project pricing and feasibility to generate quotes.

In addition, the technician may also be responsible for analyzing actual costs to determine accuracy of the project estimate and determine validity to real world scenarios.

The data technician should have a strong desire to learn, a willingness to be taught, and be able to work in team scenarios. The ability to communicate is key as calls to vendors and outside teams may be necessary to obtain pricing or verify project scope.

Technician will be trained to learn industry terminology, symbols, and align this understanding to industry software packages.

Experience with Microsoft Office/QuickBooks and similar products is extremely helpful. This position requires in-person training but can potentially become a hybrid position.
