The CNC machinist will be learning and doing the following

- Creating, understanding and following the work order process.
- Reading blueprints and understanding how they translate into the CNC machines.
- Measure, inspect, and process raw material to be loaded in the CNC machines.
- Touching the tools off and making offsets and adjustments to the machines.
- Inspection of parts coming off the machines using micrometers, go/no-go gauges, feeler gauges, and a wide array of other measuring tools.
- Help create fixtures that hold the raw material in the machines.
- Assist in maintaining equipment by completing preventive maintenance requirements, following manufacturer's instructions, troubleshooting malfunctions, calling for repairs.
- Understanding what tools are needed in the machines to achieve the desired results.
- Learning and setting speed and feed rates.
- Understand how and why being in a team environment is important in any industry.
- Assisting in prototype development.
